

# **Discover Media Gen.3 (MIB)**

Map material update

# Map material update

## Navigation map update requirements

---

- You will need a USB-C Stick with a minimum of 32 GB of storage to update your navigation data.
- You will need the "7-Zip" data compression system with Windows operating systems. You can download this program from the manufacturer's website. You will need an unzipping program that supports the "tar" file format should you be using another operating system.
- The map material requires more than 27 GB of storage capacity. This space needs to be available on your computer's hard drive. Your computer's hard drive needs to be formatted as an NTFS drive to enable your computer to handle files of this size. This is standard with newer computers; with older computers please check this in File Explorer by right-clicking on the relevant drive under the "Properties" menu option.

## Checking the version

---

Use the "MENU" button to check what version of map material you are using in your Discover Media. On your display, tap the "Setup" option and select "Version information".

The version status is specified in the format "YY.MM". For example, if the status of the map material is from March 2020, the format "20.03" is displayed.

## Downloading the new map material

---

- To download, visit <http://webspecial.volkswagen.de/maps/de/de/index.html>. After logging into the Volkswagen portal, you will be able to access the relevant map material once you have selected your vehicle and radio navigation system. We recommend using a Download Manager on account of the large volume of data. The download may take several hours depending on the speed of your internet connection. The downloaded file is in tar format.
- Download the complete file of the new version and save it on your computer in a separate folder (for example "Map update").

Name	Type	Size
 EUR_5PR041_FCT3WS-201F0_Offline_Update_USBfix2.tar	TAR File	27,826,500 KB

Fig. 1 Europe map material November 2020.

- The file shows the icon of the assigned program in front of the file name. If no program is assigned to the file type, a "blank sheet" is displayed as a symbol ⇒ Fig. 1.

### NOTE

Computers with the Windows operating system usually have a preconfigured energy-saving function, which means that the computer goes into sleep-mode after a certain period of time if no further input is made. This can interrupt a download that is in progress or the map material is incompletely downloaded. We therefore recommend setting the sleep-mode to "Never" for the duration of the download.

## Preparing the USB-C Stick

- Insert the USB-C Stick into the USB-C port of your computer. If your computer does not have a USB-C port, this can be connected to the computer using a suitable adapter.
- Delete all files on the USB-C Stick or reformat your USB-C Stick. There should not be any other files on the USB-C Stick.
- The USB-C stick must be formatted in the "exFAT" or "NTFS" format so that it can be recognized by the Discover Media.

 The formatting process depends on your operating system. With a Windows operating system, you need to access the USB-C Stick drive and right-click on "Format". The manufacturer will provide information for other operating systems.

## Unzipping map material

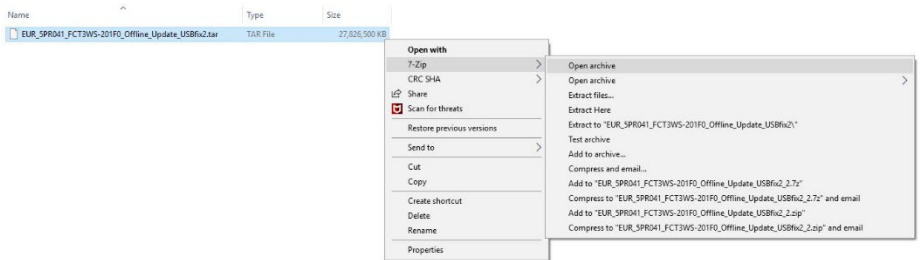

Fig. 2 Unzipping path

- Right-click on the file with the extension "tar". Select "7-Zip" in the window that appears and in the next window click on "Open" ⇒ Fig. 2.

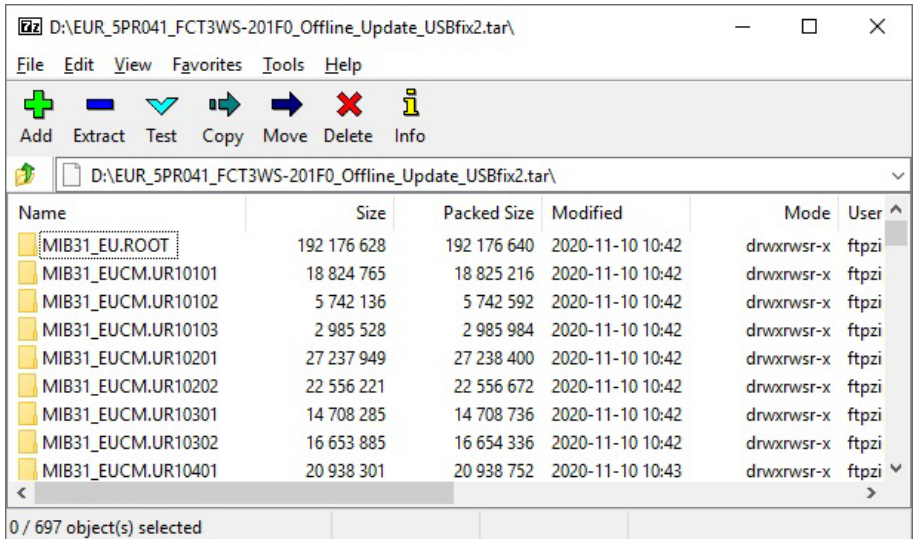

Fig. 3 Archive content (Europe map material November 2020)

Fig. 4 Destination path, shown here as E:\

- In the following window ⇒ Fig. 3 select “Extract”. In the next window ⇒ Fig. 4 select the drive letters of the USB port in which the USB-C Stick is inserted onto which the map material is to be unzipped. Alternatively, the map material can also be unzipped onto your computer and then moved onto the USB-C Stick.
- Once the material has been successfully unzipped, remove the USB-C Stick from the USB port.

 To avoid loss of data or even damage to the file system on the USB-C Stick, log out of the USB-C Stick before you remove it (safely remove hardware and eject the medium).

## Installing the map material

- Insert the USB-C Stick into the USB-C port on your vehicle.
- Turn on the ignition
- The update starts automatically and takes place in the background.
- The successful update can be traced via the version information under “Navigation database”.

 The version status is updated if the map material you have installed is more current than the last installed status. If the map material has been updated in the meantime via the online map update and is more current than the map material you downloaded, the version status will not be changed.

### NOTE

**The ignition must be left on while the data is being copied. Please ensure that the battery voltage is high enough to carry out the update (when the vehicle is stationary, switch off all electrical equipment that is not required, e.g. lighting, blowers, seat heating etc.). Connect a charger to the vehicle’s battery, if necessary. If the process is interrupted – for example, by parking the vehicle – the copying process automatically continues at the point at which it was interrupted as soon as the ignition is switched on.**

You also have the option of updating the navigation data online. Navigation data for frequently traveled regions are automatically updated in the background if there is an internet connection and valid privacy setting (privacy settings).
